

Professional Headend Platform with Intuitive Usability

Professional equipment with parallel usability of the best consumer devices

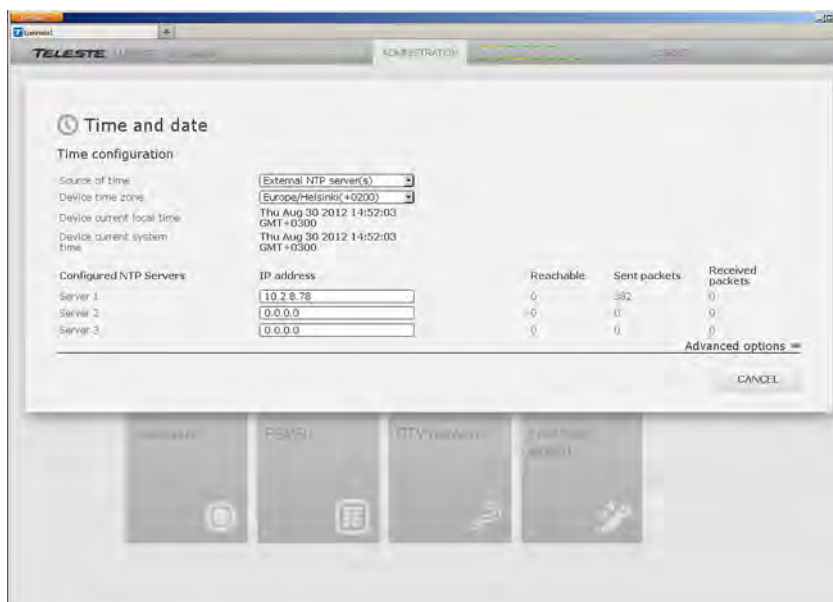

We made it easy to be a professional

Teleste Luminato is mature and most comprehensive headend platform with installed base of thousands of active devices. It is trusted by cable TV operators and Telco's of varying sizes and feature demands. One thing is common though; they all appreciate its unparalleled reliability and ease of use.

What you see is what you have

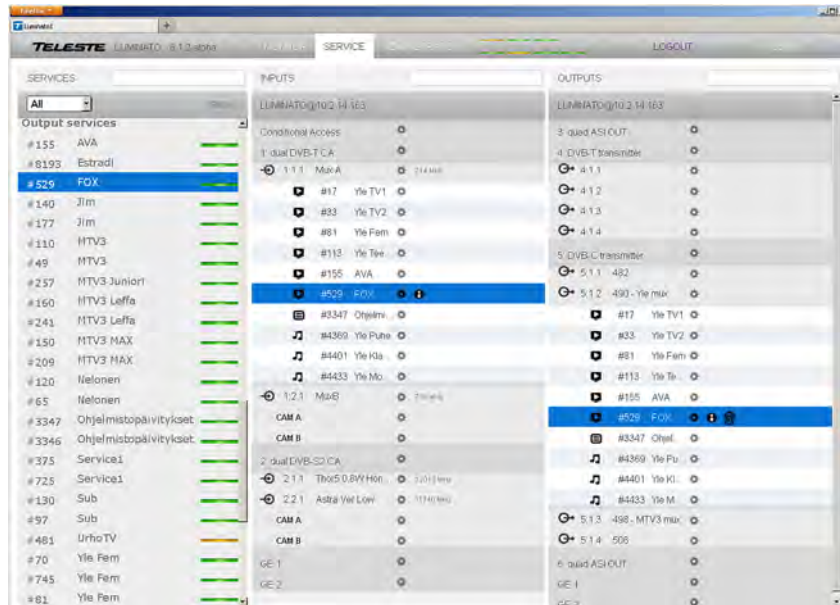

The Teleste Luminato presents the clearest overlook to device status in the industry. Point out any element in the device and get a clear view on the details.

All available – at single glance

Being stylish is not the point. However, sometimes style comes along with good design. Most of all, successful design helps keeping complicated things simple.

Unparallel usability

Features:

- Realistic view to module composition
- Drag and drop services with multiple selection
- Simple and intuitive navigation
- Device status at single glance
- Playlist view to all available channels
- Search available for all services

Create your playlist and use 'drag and drop'

The Teleste Luminato presents all available channels on a single playlist with a view to all inputs and outputs. Forget memorizing internal multicast addresses within the device and use 'drag and drop' instead.

Simple does not equal limited

In the case of the Teleste Luminato, simple does not mean limited functionality. Although it is easy to set up a service in just few minutes, you can still have access to all the DVB finesses.
